

● Organization

RCN was founded by membership fees from corporations seeking to establish safety and reliability in international resource circulation.

Corporate members also contribute to the organization and its endeavours by sharing their expertise.

A Permanent Advisory Board assists the Representative Director as per the articles of association, and takes into account the varied interests of experts, government administration and local businesses, in order to ensure fairness and impartiality as a third-party organization.

Trace & Recycle

History

The Resource Circulation Network (RCN) was founded in Japan by corporations, government agencies and industry experts as the world's first traceability certification institution in order to address the need for better information management in the domestic and international recycling chain.

Since its inception in 2009, RCN has undertaken a wide variety of projects in waste management and recycling.

Our expertise gained through consulting as well as providing IT solutions across the public and private sectors has earned us a unique position in the industry.

Our Mission

"To achieve transparency in recycling businesses and stimulate the waste management industry."

Overview

Never before has waste management and recycling been more important. In addition to providing a service essential to society, the industry must now rise to the challenge of achieving a circular economy.

To assist this transformation, RCN provides consulting as well as solution delivery services to various stakeholders in both the public and private sectors.

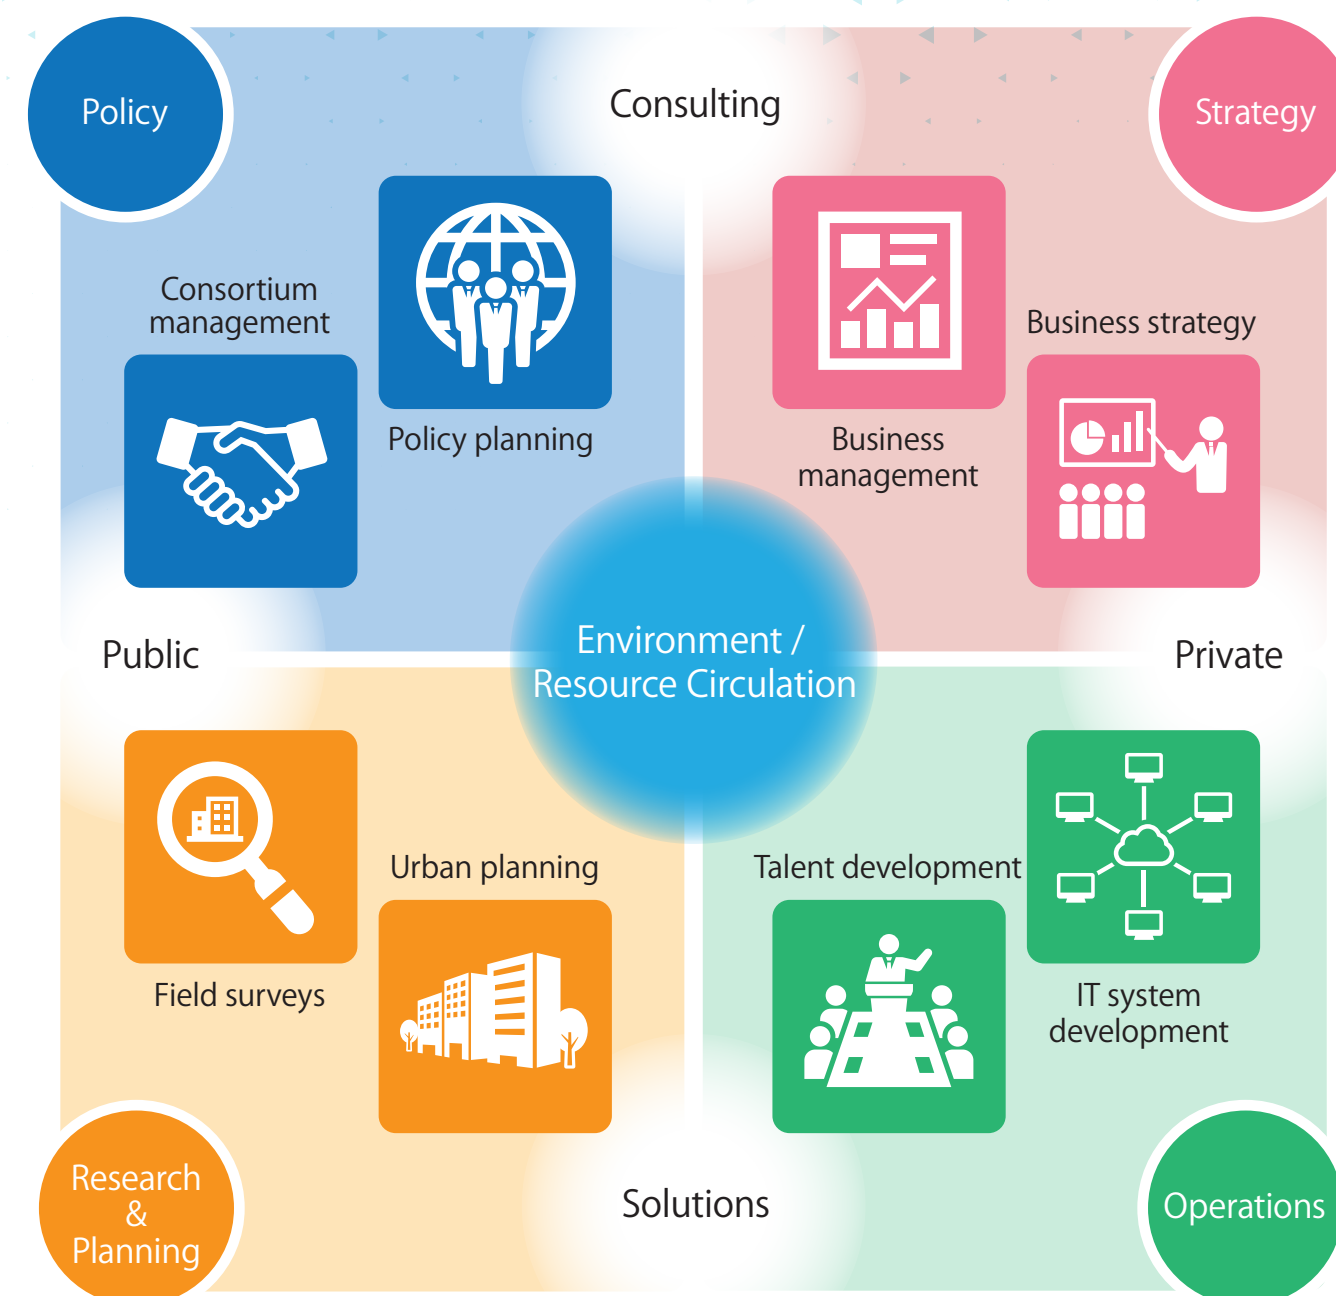

Our Unique Position

Through our unique network and knowledge-base, we not only understand the latest industry trends and challenges, but are also actively engaged in implementing business strategies and solutions.

Our Services

RCN offers a wide array of services related to the environment and resource circulation.

Project examples
